

## Pioneer Consulting Publishes "Cables of the World"

**BOSTON (October 13, 2009)**—In the first of two research reports covering marine services for undersea telecom cables, Pioneer Consulting's new report entitled "Cables of the World", provides background and overview of the global, deep water cable market.

These dedicated, specialized, ocean-going vessels are the backbone of the undersea telecommunications industry. This fleet of cable ships provides installation, maintenance and repair services for the more than one million kilometers of cable placed under the oceans of the world.

"Cables of the World" provides a comprehensive review of the status of the cable market complete with market segmentation and industry fundamentals as they apply to the cable market. Among its objectives, Pioneer Consulting seeks to both define and quantify the current deep water cable industry.

"This comprehensive report is an essential reference tool for any individual working in the submarine fiber optic cable industry. In particular, the report includes a deep water cable database where specifications are presented for both active and inactive cables." stated **Howard Kidorf, Managing Partner of Pioneer Consulting.**

A second report provided a comprehensive description of the entire marine maintenance industry including: smaller, shallow water operations, cable depots, and marine surveys which are among many other topics that will be released by Pioneer before the end of 2009.

Pioneer Consulting is an international telecommunications consulting, engineering, and market research firm. For more than 10 years, Pioneer's accurate, insightful, and thorough advisory services have provided clients with objective and independent guidance in support of their projects and their strategic goals. Pioneer's capabilities range from market analysis and feasibility study, through system design, engineering and supply, to project implementation.
